Abstracts

The industrial Internet of Things (IIoT) refers to the use of internet-connected sensors and devices in the industrial sectors, such as manufacturing, energy, automotive, healthcare, life sciences, and agriculture. Wireless Industrial IoT Sensors are designed to collect data without the use of wires. They can detect and capture data in any situation, and have now found application in various sectors, including manufacturing/industrial sector. Wireless Industrial IoT Sensors carry a tiny built-in radio transmitter and receiver, which means they can communicate with each other without being hard-wired together. This allows them to go further away from a power source and transmit more valuable information, such as the complex machine data. Wireless Industrial IoT Sensors can capture information such as vibration, temperature, pressure, humidity, and magnetic flux among others. It can also capture air quality or noise levels, and can measure machine parameters like flow rate, speed or torque. Global key players of Wireless Industrial IoT Sensors include Robert Bosch GmbH, Honeywell, Analog Devices, NXP Semiconductors and Infineon Technologies, etc. The top five players hold a share over 35%. The China region is the world's largest production area for Wireless Industrial IoT Sensors, has a share about 35%, followed by Southeast Asia and North America, with share 24% and 15%, separately. In terms of product types, Traditional Wireless Technology is the largest market segment, occupying for a share of above 50%. In terms of product applications, Wireless Industrial IoT Sensors are mainly used in manufacture, with a market share of 25%, followed by automotive and energy.

The global Wireless Industrial IoT Sensors market size was estimated at USD 8467.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.20% during the forecast period.
