Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wireless ISE (Ion-Selective Electrode) Meters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global Wireless ISE (Ion-Selective Electrode) Meters production reached approximately 0.7 million units, with an average global market price of around US$ 1500 per unit. Monthly production capacity is 800 per line. Gross Profit Margin: 35%. Wireless ISE meters are produced through a chain that includes sensor material suppliers (membranes, polymers, ionophores), electronics manufacturers, firmware/software developers, integrators assembling portable wireless modules, and distributors serving environmental, industrial, and laboratory markets. These meters are becoming increasingly valuable because wireless data logging eliminates most of the errors and hassles of traditional ISE use—no notebooks, no manual transcription—making them especially attractive for environmental scientists, agriculture operators, and distributed water systems.

The global Wireless ISE (Ion-Selective Electrode) Meters market size was estimated at USD 1072.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Wireless ISE (Ion-Selective Electrode) Meters market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
