Abstracts

A wireless manhole camera is a specialized inspection system designed for underground infrastructure assessment, consisting of a waterproof, submersible camera unit mounted on a pan-and-tilt mechanism or robotic crawler, which transmits real-time video, images, and sometimes sensor data (such as distance, tilt, or laser profiling measurements) wirelessly to an above-ground monitor or mobile device. These systems are engineered to endure harsh environments, including exposure to sewage, chemicals, and confined spaces, and typically feature high-resolution imaging, LED lighting arrays for low-visibility conditions, and durable construction to facilitate non-destructive evaluation of pipes, culverts, manholes, and other subterranean structures without the need for personnel entry.

The global Wireless Manhole Camera market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
