Abstracts

Wireless motion sensors are electronic devices that detect movement within a designated area and transmit this data wirelessly to a central hub, smart home system, or other connected devices, utilizing communication protocols such as Wi-Fi, Zigbee, Z-Wave, or Bluetooth; these sensors operate primarily through passive infrared (PIR) technology, which identifies changes in infrared radiation caused by moving objects, though some advanced models may incorporate microwave, ultrasonic, or dual-technology detection methods to reduce false alarms and enhance accuracy. They are widely used in residential, commercial, and industrial applications for purposes including security and intrusion detection, energy management (e.g., automating lighting and HVAC systems), occupancy monitoring, elderly care, and automation in smart environments, offering advantages like easy installation without extensive wiring, flexibility in placement, scalability, and integration with broader IoT ecosystems.
