Report Overview

Wireless Patient Monitoring Device is a technology that is used to enable monitoring of patients outside of conventional clinical settings (e.g. in the home). These devices have the advantage of allowing patient movement without restricting patients to a bedside monitor with a hard-wired connection. It simplifies the accessibility towards health care resources, reduces healthcare costs, allows earlier diagnosis and prevents misdiagnosis. But the most important advantage of using patient monitoring systems in healthcare facilities is that it improves communication between patients and their healthcare providers by simplifying data transmission.
