Abstracts

A wireless router for VPN is a specialized networking device that integrates both wireless access point functionality and dedicated VPN (Virtual Private Network) capabilities, allowing users to establish secure, encrypted internet connections directly through the router rather than relying on software installed on individual devices. These routers typically support protocols such as OpenVPN, WireGuard, or IPsec, and may come pre-configured for specific VPN services or allow manual setup, enabling all connected devices—including IoT gadgets, smart home systems, and traditional computers—to route their traffic through a VPN tunnel for enhanced privacy, security, and access to geo-restricted content. This product category targets both individual consumers seeking to protect their home network and small to medium businesses requiring a cost-effective solution for secure remote access or branch office connectivity without the complexity of enterprise-grade hardware.

The global Wireless Router For Vpn market size was estimated at USD 3585.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
