Report Overview

Wireless Sensor Networks (WSN) are networks of spatially distributed autonomous sensors that monitor physical or environmental conditions, such as temperature, sound, pressure, etc., and cooperatively pass their data through the network to a main location. These networks have applications in various industries, including healthcare, agriculture, environmental monitoring, and smart cities. The sensors in a WSN are typically small, low-cost, and low-power devices that communicate wirelessly. They can be deployed in remote or harsh environments where traditional wired networks are impractical.
