Abstracts

Wireless signal jammers are electronic devices designed to intentionally block, disrupt, or interfere with authorized radio frequency signals within a designated area, operating by transmitting noise or signals on the same frequencies used by communication systems such as cellular networks (2G, 3G, 4G, 5G), Wi-Fi, Bluetooth, GPS, and radio communications to prevent devices from transmitting or receiving data. These devices are strictly regulated or outright banned in most countries due to their potential for misuse, including disrupting emergency services, public safety communications, and critical infrastructure, though they are legally employed in limited contexts such as government, military, and correctional facilities for security purposes, as well as in testing and shielding applications where signal isolation is necessary.

The global Wireless Signal Jammer market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
