Report Overview:

A wireless syringe infusion pump is a medical device used to administer fluids, medications, or nutrients to a patient in a controlled and precise manner. It is designed to deliver these substances through a syringe, which contains the liquid medication, directly into the patient's bloodstream or other body tissues. The "wireless" aspect refers to the pump's ability to operate without being physically connected to a control device or a power source through traditional cables.

These pumps are commonly used in hospitals, clinics, and other healthcare settings where accurate and continuous infusion of medications or fluids is essential.
