## Abstracts

Wireless tire pressure monitoring system is an electronic system used to monitor the tire pressure of a vehicle in real time. It measures the air pressure and temperature data through sensors installed in the tires, and transmits the data to the vehicle display or the driver's dashboard through wireless signals to remind the driver of abnormal tire pressure (such as too low or too high). TPMS helps improve driving safety, reduce tire wear, reduce fuel consumption, and meet the regulatory requirements of many countries. The system is widely used in vehicles such as cars, trucks, and airplanes.

The global Wireless Tire Pressure Monitoring System market size was estimated at USD 5121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
