WLAN is a computer network that enables data transmission at high speed without the need of wired connection for connectivity between devices. The network is utilized in homes and by enterprises and small and medium-sized enterprises (SMEs) related to multiple sectors, and by government organizations. WLAN overcomes the disadvantages of a wired network of connecting multiple devices over long distances. It helps user to access remote applications and data. WLAN also ensures increased bandwidth, leading to improved performance of network. Data transmission can take place at speeds ranging from 1 to 600 Mbps. WLAN are implemented in two ways: internal WLAN and authorized visitor WLAN.
