Abstracts

Women's health refers to the branch of healthcare that focuses on the unique medical needs of women throughout different stages of life, from puberty to menopause and beyond. It includes a wide range of conditions and treatments related to reproductive health, hormonal imbalances, pregnancy, breast health, osteoporosis, and mental well-being. Women's health also covers issues like sexual health, contraception, fertility, and gynecological diseases such as endometriosis and polycystic ovary syndrome (PCOS). Recognizing that women experience health issues differently than men, this field emphasizes gender-specific research and treatments tailored to the physiological, psychological, and social needs of women.Market Driver: The increasing focus on women’s health, driven by a combination of greater awareness, advocacy, and healthcare advancements, is a major driver of the women’s health market. As women continue to seek more personalized and comprehensive care, demand for treatments addressing conditions like reproductive health, menopause, osteoporosis, breast cancer, and mental health is on the rise. This is further supported by the growing recognition of the need for gender-specific healthcare solutions, including pharmaceuticals, diagnostics, and wellness products. Additionally, the rise in women’s life expectancy and the increasing number of women in the workforce who are able to access healthcare resources have also contributed to the growth of this market.Market Challenge: Despite the growing demand for women’s health products and services, the market faces several challenges, including underrepresentation of women in clinical research and the lack of tailored treatments for gender-specific health issues. Many medical studies have historically been conducted with a male-dominated sample, which leads to insufficient data on how treatments affect women differently. Moreover, there are still significant social and cultural barriers in certain regions that prevent women from accessing adequate healthcare or seeking treatments for issues like reproductive health or menopause. These challenges can slow market growth, limit access, and
