Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wood-based Powdered Activated Carbon (PAC) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Wood powdered activated carbon is a black powdered activated carbon made from high-quality wood through carbonization and activation. It has the characteristics of large specific surface area and strong adsorption capacity. It is widely used in the food industry, medicine and other fields for decolorization, deodorization, purification, etc. Traditionally, major activated carbon producers worldwide include China, the United States, Japan, and the Netherlands. Since the 1990s, developed countries like North America and Western Europe have gradually shifted their activated carbon industries to developing countries, driven by raw material constraints and rising production costs. China is the world's largest producer of wood-based activated carbon, but most are small companies with annual output ranging from a few hundred to a thousand tons. With the exception of our company and several other larger wood-based activated carbon companies, the overall production technology and R&D capabilities of most domestic companies lag far behind those of European and American companies. Globally, the wood-based activated carbon industry has developed a competitive landscape dominated by large domestic and European and American companies, with numerous small and medium-sized enterprises participating. In recent years, with the country's increasing emphasis on environmental protection and increasingly stringent environmental policies, clean production and comprehensive energy utilization are the future development directions of the activated carbon industry. This will accelerate the concentration of industrial resources in technologically advanced activated carbon companies, such as our company. Furthermore, benefiting not only from strong demand

in traditional sectors like food and beverages, but also from the rapid growth of environmental governance, activated carbon applications are also expanding, creating a broader and more multifaceted industry landscape. The continuous development of new energy industries such as power batteries and energy storage industries and the accelerated pace of technological updates have put forward new demands on carbon materials, which has brought new development opportunities to the activated carbon industry.

The global Wood-based Powdered Activated Carbon (PAC) market size was estimated at USD 74.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the forecast period.
