Abstracts

Wood hole saws are hole saws designed specifically for woodworking. They can be attached to power tools like electric drills to bore holes into thin wooden materials. These saws consist of a center drill and peripheral saw blade sections, enabling the efficient creation of smooth, uniform holes. Wood hole saws, with their finer-toothed blades compared to metal hole saws, vary in performance and type based on hole size, depth capacity, and material compatibility. For deeper holes in wood, core drills are used, while smaller holes and non-penetrating depressions are made with woodworking drills and spade bits, respectively.

The global Wood Hole Saw market size was estimated at USD 67.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
