Report Overview:

A pallet, sometimes inaccurately called a skid (a skid has no bottom deck boards), is a flat transport structure that supports goods in a stable fashion while being lifted by a forklift, pallet jack, front loader, work saver, or other jacking device, or a crane. A pallet is the structural foundation of a unit load which allows handling and storage efficiencies. Goods or shipping containers are often placed on a pallet secured with strapping, stretch wrap or shrink wrap and shipped. Since its invention in the twentieth century, its use has dramatically supplanted older forms of crating like the wooden box and the wooden barrel, as it works well with modern packaging like cardboard boxes and Intermodal containers commonly used for bulk shipping. Most pallets are wooden pallets.

The Global Wood Pallet Market Size was estimated at USD 6572.20 million in 2023 and is projected to reach USD 8315.93 million by 2029, exhibiting a CAGR of 4.00% during the forecast period.
