The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wood-Pellets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Wood pellet is a solid fuel that is produced by crushing and densifying waste timber like sawdust, forestry residues, industrial byproducts like old paper and forestry wastes. The length is 1-2 cm and the diameter is generally 6, 8, 10, or 12mm. It is possible to produce 25mm wood pellet at maximum. In Sweden, 6mm wood pellet is encouraged to use in house as it can realize the best condition of combustion. Wood pellet production doesn't need to add binder as lignin, an element of wood, plays a role of binder and helps to pelletize when it is melted by heat. Wood-Pellets are mainly classified into the following types: white pellet and black pellet. White pellet is the most widely used type which takes up about 97% of the total sales, while the black pellet has a fast growing speed. Wood-Pellets have wide range of applications, such as power generation, industrial furnace, civil use etc. And power generation was the most widely used area which took up about 61% of the global total. Europe is the largest consumer of Wood-Pellets in the world. Europe market took up about 57% the global market, while North America and China were about 21%, 8%. Enviva, Pinnacle, Graanul Invest Group, Drax Biomass International, Vyborskaya Cellulose and Lignetics, etc. are the key suppliers in the global Wood-Pellets market.
