## Abstracts

Wood laser marking machine is a device specially used for laser marking, imprinting or engraving on the surface of wood products. Wood laser marking machine generates high-energy laser beams through lasers. After being focused by the optical system, these laser beams are irradiated to the surface of wood products with extremely high precision and speed. Because the energy of the laser beam is highly concentrated, it can quickly generate high temperature on the surface of wood, causing carbonization reaction of wood fibers, thus leaving clear and lasting marks or patterns on the surface of wood.

The global Wood Products Laser Marking Machine market size was estimated at USD 649.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
