## Abstracts

A surgical sponge was defined as cotton material (e.g. laparotomy sponge, raytec, cottonoid, towel, and kerlix) inserted during an invasive procedure to absorb fluids or isolate tissue, with the intention of removing the absorbent material prior to completion of the procedure. X-ray detectable sponges are affordable, easily detected and suitable for operating room and surgical applications. Within the gauze is a heat-bonded barium sulfate marker to allow vivid and accurate x-ray visibility. With the continuous advancement of medical technology and the elevation of healthcare standards, X-Ray detectable sterile sponges have emerged as a significant innovation in the medical field. These sponges serve a dual purpose, offering a sterile environment to prevent infections while being easily identifiable during X-ray examinations, thereby enhancing patient safety and surgical efficiency both inside and outside the operating room. In terms of market trends, there is a growing global demand in the healthcare industry for improving surgical quality and reducing the risk of infections. The application of X-ray detectable sterile sponges in surgeries effectively reduces the complexity of surgical procedures and is poised to lower the risk of postoperative complications. Furthermore, with the increasing aging population worldwide, the demand for surgeries is on the rise, further driving the growth of this market. Therefore, X-Ray detectable sterile sponges hold immense market potential and are set to become an indispensable product in the healthcare sector.

The global X-Ray Detectable Sterile Sponge market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
