Abstracts

X-ray Digital Subtraction Angiography (DSA) is a specialized imaging technique used to visualize blood vessels in the body, helping doctors diagnose and treat conditions related to the vascular system. The DSA machine utilizes X-ray technology to capture detailed images of blood vessels by subtracting the background structures, such as bones and tissues, from the final image. This is achieved by first taking an initial X-ray image of the area without contrast dye, then injecting a contrast agent into the blood vessels and capturing a second image. The machine digitally subtracts the non-vascular structures, leaving only the blood vessels clearly visible. DSA is particularly valuable for detecting blockages, aneurysms, vascular malformations, and other vascular diseases. It allows for precise localization of abnormal blood vessels and provides real-time, high-resolution images, making it an essential tool for interventional procedures such as angioplasty, stent placement, and embolization.

The global X-ray Digital Subtraction Angiography Machine market size was estimated at USD 4706.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
