Abstracts

X-ray protection clothing refers to specialized garments designed to shield individuals from ionizing radiation exposure during medical, dental, industrial, or research procedures, primarily utilizing materials such as lead, lead-free composites (e.g., barium, bismuth, or tungsten), or lightweight polymer blends that attenuate radiation through high atomic number elements. These products include aprons, vests, skirts, thyroid collars, and gloves, engineered to provide effective protection while ensuring wearer comfort, mobility, and durability, with variations in lead equivalence (e.g., 0.25mm to 1.0mm Pb) tailored to specific use cases and regulatory standards. The market is driven by increasing diagnostic imaging volumes, rising awareness of occupational safety, stringent radiation protection guidelines, and technological advancements in material science aimed at reducing weight and improving ergonomics without compromising shielding efficacy.
