Abstracts

X-ray protective glasses are specialized eyewear designed to shield the eyes from ionizing radiation exposure during medical, dental, veterinary, or industrial procedures involving X-ray equipment. These glasses incorporate leaded glass or composite materials, such as lead-equivalent polymers, within the lenses and often the frame to attenuate scattered radiation, thereby reducing the risk of cataracts and other ocular damage for professionals like radiologists, surgeons, and technicians who are frequently near radiation sources. Key features typically include optical clarity, comfort for extended wear, and compliance with international safety standards that specify minimum lead equivalence?commonly ranging from 0.5mm to 0.75mm Pb?to ensure effective protection without compromising visibility or ergonomics.
