Abstracts

X-ray scanners are security devices that use X-ray radiation to inspect the contents of objects such as luggage, vehicles, or even people for hidden threats or prohibited items. By passing X-ray beams through the object and capturing the resulting images on a detector, these scanners create detailed internal images that reveal the shape, density, and composition of materials inside. X-ray scanners are commonly used in airports, government buildings, transportation hubs, and border checkpoints to detect dangerous items like explosives, weapons, drugs, or contraband, ensuring safety and security in public and high-risk areas.

The global X-Ray Scanners market size was estimated at USD 2077.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
