Abstracts

The XPS Foam Board Extrusion Line is specialized automated equipment for producing extruded polystyrene (XPS) foam insulation boards. The production line utilizes melting, foaming, extrusion, and molding processes to mix polystyrene resin with a blowing agent, which is then extruded under high temperature and pressure to form rigid foam boards with a closed-cell structure. XPS foam boards offer excellent thermal insulation, moisture resistance, and compressive strength, making them widely used in building insulation, cold storage, and underfloor heating systems. Key components of the production line include a mixing system, extruder, foaming device, die, cooling calibrator, and cutting machine. Its main advantages include continuous production, high-density foam board forming capability, and adjustable foaming ratio and thickness to meet various application requirements.

The global XPS Foam Board Extrusion Line market size was estimated at USD 1772.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
