Abstracts

A YAG (yttrium-aluminum-garnet) laser cutting machine is a type of laser cutting machine that uses a crystal laser to cut through materials. The laser is produced by passing an electrical current through a crystal of yttrium-aluminum-garnet, which causes the crystal to emit a beam of laser light. The market for laser marking systems had been growing at a significant pace. This was largely driven by increasing demand across various industries, including automotive, electronics, medical devices, and aerospace. Continuous technological advancements in laser marking systems, such as the development of more precise and efficient lasers, improved software, and automation integration, were enhancing the capabilities of these systems. Industries such as pharmaceuticals and automotive were increasingly adopting laser marking for product traceability, counterfeit prevention, and compliance with regulatory standards. The Asia-Pacific region, particularly China, had emerged as a key player in the global market. It was both a significant producer and consumer of laser marking systems.

The global YAG Laser Cutting Machine market size was estimated at USD 371.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
