Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Yaw Gear Box for Wind Power competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Yaw Gear Box for Wind Power is the core transmission component of wind turbine yaw system, which is responsible for converting the high speed and low torque output of yaw motor into low speed and high torque power, driving the nacelle weighing hundreds of tons to accurately align with the wind direction, and maximizing the capture of wind energy. Market Concentration and Key Players: Internationally, the yaw gear box for wind power market concentration is relatively high, mainly concentrated in Europe, America and Japan and other developed countries. For example, Bonfiglioli and Liebherr and other large manufacturers; from the domestic point of view, yaw gear box for wind power manufacturers have Yinchuan Weili Transmission and Chongqing Gear Box and other enterprises. Manufacturing Processes and Market Trends: The manufacturing process of wind power yaw reducer takes multi-stage planetary gear transmission as the core, adopts integrated casting of integral box and internal gear, realizes micron precision control in combination with five-axis CNC machining center, and optimizes load sharing performance and thermal deformation through sun gear floating design and liquid nitrogen cold assembly process to ensure design life under-40? to high temperature and high humidity environment. The manufacturing difficulty lies in the balance between high torque density and light weight, which needs to be tested by more than 20MPa pressure test and fatigue verification. The market trend shows three-polarization development, the proportion of units above 5MW increases, and the demand for 17MW offshore models promotes the value of single reducer; integrated temperature control and vibration sensors realize predictive maintenance, and combined with servo control technology, the yaw frequency is

reduced by 40%; the head enterprise seizes market share by virtue of process optimization, and the localization rate increases. Prices continue to fall due to technology maturity, but are expected to rise in 2025, mainly due to increased demand for offshore wind and lightweight materials.

The global Yaw Gear Box for Wind Power market size was estimated at USD 626.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
