Abstracts

Superconducting wires are unique materials that have zero electrical resistance below certain temperatures called a transition temperature. This temperature changes depending on the material and other physical attributes of the wire. High temperature conducting wires are coated conductors that offer very efficient electricity handling below a set temperature level. Two of the most common materials for superconducting wires are bismuth strontium calcium copper oxygen (BSCCO) wires and Rare earth barium copper oxide (ReBCO) wires. However, second-generation wires are more refined and efficient formulas.

The global Yttrium Based Superconducting Wire market size was estimated at USD 265.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
