Abstracts

Zeatin is a natural plant cytokinin (CKs) found in higher plants. It was first discovered and isolated from young corn cobs. Later, the substance and its derivatives were also found in coconut water. As a cell growth regulator, it not only promotes the growth of lateral buds, stimulates cell differentiation (lateral dominance), promotes callus and seed germination, but also prevents leaf senescence, reverses toxin damage to buds, and inhibits excessive root formation. High concentrations of zeatin can also produce adventitious bud differentiation.

The global Zeatin market size was estimated at USD 78.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Zeatin market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
