Report Overview:

Zeolites are minerals that contain mainly aluminum and silicon compounds. They are used as drying agents, in detergents, and in water and air purifiers. Zeolites are also marketed as dietary supplements to treat cancer, diarrhea, autism, herpes, and hangover, and to balance pH and remove heavy metals in the body. Countless studies have demonstrated that specific zeolites have chelating properties that allow them to absorb and effectively neutralize many toxic and radioactive elements, including cesium – a radioactive byproduct of nuclear fission. Powdered zeolites have effectively cleaned up toxic spills and reduced environmental toxins, especially in significant incidents like Chernobyl, Fukushima, and other nuclear disasters. The ability of zeolites to trap toxic elements led to the development of dietary supplements designed to detoxify the body of heavy metals. As it stands, zeolite supplements are taken by thousands of people planetwide.

The Global Zeolite Supplements Market Size was estimated at USD 3192.66 million in 2023 and is projected to reach USD 4278.47 million by 2029, exhibiting a CAGR of 5.00% during the forecast period.
