Abstracts

Zero backlash couplings are mechanical devices designed to transmit torque between two shafts while eliminating any rotational play or lost motion, ensuring precise synchronization and positioning accuracy in applications where even minimal backlash could compromise performance, such as robotics, CNC machinery, aerospace systems, and high-precision instrumentation. These couplings typically employ specialized designs like bellows, disc, or Oldham configurations, using flexible elements that accommodate misalignment while maintaining torsional stiffness, and are characterized by their ability to provide consistent angular velocity transmission, reduce vibration, and enhance system responsiveness under varying loads and speeds.

The global Zero Backlash Coupling market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
