Abstracts

Zero Energy Houses (ZEH) refer to residential buildings designed to achieve a net zero energy balance over the course of a year, meaning the total amount of energy consumed by the building annually is roughly equal to the amount of renewable energy created on-site or through associated renewable energy mechanisms. This is accomplished through a combination of highly efficient building envelopes, advanced insulation, energy-efficient appliances and systems, passive solar design, and on-site renewable energy generation?most commonly through solar photovoltaic panels. The concept emphasizes minimizing energy demand first through conservation and efficiency measures before offsetting the remaining energy needs with clean, self-generated power, thereby reducing both operational costs and environmental impact.

The global Zero Energy Houses (Zeh) market size was estimated at USD 1380.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
