Abstracts

Zero hold up sparkler filter press is a filtration device used for solid-liquid separation. It adopts a unique structural design to ensure that the liquid in the solid-liquid mixture can quickly pass through the filter cloth, while the solid particles are retained on the filter cloth. The device is characterized by its zero hold-up performance, which allows the filter cake to quickly and completely detach after filtration, avoiding retention and accumulation of the filter cake on the filter cloth. This makes the zero hold up sparkler filter press have high filtration efficiency and good filtration results. Additionally, the device boasts a simple structure, easy operation, and ease of maintenance and cleaning. It is widely used in solid-liquid separation processes in the chemical, pharmaceutical, food, and environmental protection industries, such as sludge dewatering, crystal filtration, and suspension treatment.
