The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zero Liquid Helium Magnetic Resonance System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, the global production of zero liquid helium magnetic resonance systems will reach 700 units, with an average selling price of US\$1.5 million per unit. The zero-liquid helium MRI system is a new type of magnetic resonance imaging (MRI) device. It utilizes a fully enclosed superconducting magnet and cryogenic refrigeration technology (such as a pulse tube cooler), eliminating the need for traditional liquid helium storage and replenishment to maintain the superconducting state. This system achieves long-term stable operation of the magnet through circulating refrigeration, reducing the costs and supply risks associated with scarce liquid helium resources while simplifying maintenance and operation. This improves the safety and sustainability of the device, and represents a key step in the development of greener and more intelligent MRI technology.

The global Zero Liquid Helium Magnetic Resonance System market size was estimated at USD 1050.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
