Abstracts

The modern enterprise has an incredible diversity of endpoints accessing data. Not all endpoints are managed or even owned by the organization, leading to different device configurations and software patch levels. This creates a massive attack surface and, if left unresolved, accessing work data from untrusted endpoints can easily become the weakest link in your Zero Trust security strategy. Zero Trust adheres to the principle, 'Never trust, always verify.' In terms of endpoints, that means always verify all endpoints. That includes not only contractor, partner, and guest devices, but also apps and devices used by employees to access work data, regardless of device ownership.

The global Zero Trust Endpoint Security Platform market size was estimated at USD 33340.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
