Report Overview

A zero-turn riding lawn mower (colloquially, a z-turn) is a standard riding lawn mower with a turning radius that is effectively zero when the two drive wheels rotate in opposite direction, like a tank turning in place. Different brands and models achieve this in different ways, but hydraulic speed control of each drive wheel is the most common method. Both commercial duty and homeowner models exist, with varying engine power options, size of cutting decks, fuel type, and prices. A z-turn mower typically drives faster and costs more than a similarly sized conventional riding mower that has steerable front wheels.

The global Zero-Turn Riding Mower market size was estimated at USD 3656.20 million in 2023 and is projected to reach USD 6021.50 million by 2032, exhibiting a CAGR of 5.70% during the forecast period.
