Abstracts

Zigbee enabled lighting refers to a category of smart lighting systems that utilize the Zigbee wireless communication protocol, a low-power, low-data-rate, and mesh-networking standard based on IEEE 802.15.4, designed specifically for home automation and IoT applications; these systems typically consist of Zigbee-compatible light bulbs, switches, sensors, and controllers that connect to a central Zigbee hub or gateway, which then interfaces with user applications or voice assistants, enabling features such as remote control, scheduling, dimming, color tuning, and integration with other smart home devices, all while emphasizing energy efficiency, interoperability within the Zigbee Alliance ecosystem, and reliable performance even in environments with many connected devices due to the self-healing nature of mesh networks.

The global Zigbee Enabled Lighting market size was estimated at USD 3540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
