Zika Virus Testing is a test tools for Zika virus, including the Nucleic Acid Amplification Test/ Molecular Tests; Zika Virus Antibody Test/ Serological Test. Zika virus (Zika) is a disease caused by the Zika virus, which is spread to people primarily through the bite of an infected Aedes species mosquito. The most common symptoms of Zika are fever, rash, joint pain, and conjunctivitis. The illness is usually mild with symptoms lasting for several days to a week after being bitten by an infected mosquito. However, Zika virus infection during pregnancy can cause a serious birth defect called microcephaly, as well as other severe fetal brain defects. Once a person has been infected, he or she is likely to be protected from future infections. Zika virus testing is recommended only for certain people. People live in or traveled to an area with risk of Zika; People had sex without a condom with a partner who lives in or traveled to an area with risk of Zika; Pregnant women who don't have Zika symptoms lives in or traveled to an area with risk of Zika.
