Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zinc Chromate Primers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Zinc Chromate Primers reached approximately 730 kilotons, with an average global market price of around USD 1900 per ton. Zinc Chromate Primers are corrosion-resistant coatings formulated with zinc chromate, a yellow-green inorganic compound that provides strong anti-rust and anti-oxidation protection for metals such as steel and aluminum. These primers act as a base layer applied before paint or other finishes, enhancing adhesion while protecting substrates from moisture, salt, and harsh environmental conditions. Due to their excellent durability and resistance to corrosion, zinc chromate primers have historically been widely used in the aerospace, automotive, marine, and industrial sectors, though their use has declined in recent years because of environmental and health concerns associated with hexavalent chromium compounds.

The global Zinc Chromate Primers market size was estimated at USD 1384.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
