Zinc phosphate ($\text{Zn}_3(\text{PO}_4)_2$) is an inorganic chemical compound used as a corrosion resistant coating on metal surfaces either as part of an electroplating process or applied as a primer pigment (see also red lead). It has largely displaced toxic materials based on lead or chromium, and by 2006 it had become the most commonly used corrosion inhibitor. Zinc phosphate coats better on a crystalline structure than bare metal, so a seeding agent is often used as a pre-treatment. One common agent is sodium pyrophosphate.

The global Zinc Phosphate market size was estimated at USD 133.61 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Zinc Phosphate market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
