## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zinc-Plated Chain competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Zinc-Plated Chain is a chain product that forms a protective layer on the surface of ordinary metal chain through galvanizing treatment, the main purpose of which is to improve its corrosion resistance and service life. This type of chain is usually based on carbon steel or alloy steel. Through electrogalvanizing or hot-dip galvanizing, a layer of zinc is covered on the surface of the chain to provide protection in humid, outdoor or mild chemical corrosion environments. Compared with stainless steel chains, zinc-plated chains have a higher cost-effectiveness, especially in applications with high strength requirements but moderate corrosive environments. It is more economical and practical. Its appearance is often silvery white or zinc-colored, with a certain aesthetic and practicality. It is one of the common basic chain materials in industrial and civil fields.

The global Zinc-Plated Chain market size was estimated at USD 569.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
