Report Overview:

Zinc sulfate is the inorganic compound with the formula ZnSO_4 as well as any of three hydrates. It was historically known as "white vitriol". It is a powder that is colorless and completely water-soluble that is a common source of soluble zinc ions.

Monohydrate zinc sulfate and heptahydrate zinc sulfate have the same active components, but they differ on the number of water of hydration. Monohydrate zinc sulfate has one molecule of water in its molecular formula while heptahydrate zinc sulfate contains seven molecules of water in its molecular formula. As a result, monohydrate zinc sulfate contains higher active component of zinc which is about 35 – 36% as zinc while heptahydrate zinc sulfate contains about 20 – 22% as zinc. However, because of the difference in the number of water of hydration, heptahydrate zinc sulfate is less stable than monohydrate zinc sulfate because of its ability to absorb water is greater than the latter.

The Global Zinc Sulfate Market Size was estimated at USD 4832.98 million in 2023 and is projected to reach USD 6551.03 million by 2029, exhibiting a CAGR of 5.20% during the forecast period.
