Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zinc Sulfide Multispectral Windows competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of zinc sulfide multispectral windows reached 40,000 units, with an average selling price of \$1,545 per window. Zinc sulfide multispectral windows are optical components based on zinc sulfide (ZnS) and exhibit broadband transmittance, covering the visible to long-wave infrared spectrum. Their core material is typically polycrystalline zinc sulfide produced by chemical vapor deposition (CVD). Through grain boundary control and impurity regulation, they achieve low absorption, low scattering, and high uniformity. They are suitable for use as transmissive windows or protective covers in multispectral detection systems and exhibit high temperature resistance, radiation resistance, and mechanical strength.

The global Zinc Sulfide Multispectral Windows market size was estimated at USD 62.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
