## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zirconia Abrasive Grain competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Zirconia Abrasive Grain is a high-performance synthetic abrasive produced by fusing zirconia ( $ZrO_2$ ) and alumina ( $Al_2O_3$ ) at 1,800–2,000 °C in electric arc furnaces to form a tough, self-sharpening crystalline material. The supply chain starts with zircon sand and alumina feedstocks, which are processed and fused into ingots, then crushed and graded into abrasive grains. These are supplied to manufacturers of coated and bonded abrasives for use in industries such as metal fabrication, shipbuilding, automotive, aerospace, and foundries. The industry produces around 560,000 tons annually, with 710,000 tons of capacity, achieving an average gross margin of 26 %. Unit prices range from USD 1,850–3,600 per ton, depending on grit size, zirconia content, and whether the grain is electrofused or sintered.

The global Zirconia Abrasive Grain market size was estimated at USD 1619.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
