Abstracts

Zirconia Ceramic Femoral Head is a medical instrument used in hip replacement surgery, which is made of zirconia ceramic material. This material is widely used for its excellent mechanical properties and biocompatibility. Through precise control of chemical composition and optimization of sintering process, zirconia ceramic femoral head obtained a dense fine crystal structure, with high density (99.6% of theoretical density), high strength, high toughness and excellent wear resistance. Compared with metal femoral heads, the chemical inertness of zirconia ceramic femoral heads effectively avoids the release of metal ions, reduces the risk of prosthesis loosening, and provides better biocompatibility.

The global Zirconia Ceramic Femoral Head market size was estimated at USD 57.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.40% during the forecast period.
