## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Zirconia Dispersion for OLED competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Zirconia dispersions are high-performance materials in which nano-sized zirconium oxide (ZrO<sub>2</sub>) particles are stably dispersed in aqueous or organic solvents. Zirconia, which has a high refractive index, excellent thermal stability, and mechanical strength, is finely divided, and special dispersion technology is used to achieve uniform dispersion and high transparency. These dispersions are used in optical coatings, adhesives, inks, resin additives, etc., and contribute to the addition of functionality such as refractive index adjustment, improved durability, and low haze. There is a wide range of particle size and dispersion medium options, and since it has high affinity with various substrates and polymers, it is widely used in optical films, electronic materials, and display-related products. Furthermore, since functionality can be added without compromising transparency, demand is expanding in the field of high-performance materials. In 2024, global Zirconia Dispersion for OLED sales volume reached approximately 1005 tons, with an average global market price of around US\$ 68 per kg.

The global Zirconia Dispersion for OLED market size was estimated at USD 73.85 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
