Abstracts

Zirconia grinding wheels are abrasive tools composed primarily of zirconium oxide (ZrO₂) grains, often combined with aluminum oxide or other ceramic materials, bonded together using resin, vitrified, or other bonding systems; they are engineered for high-performance grinding applications where exceptional durability, aggressive material removal, and heat resistance are required, particularly on hard metals like stainless steel, alloys, and high-tensile materials, offering a longer service life and reduced loading compared to conventional abrasive wheels due to zirconia's self-sharpening properties and toughness under intense friction and pressure.

The global Zirconia Grinding Wheel market size was estimated at USD 780.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
