Abstracts

Zirconia implant abutments are custom-milled or prefabricated components, typically made from yttria-stabilized zirconia, that serve as the connecting piece between a dental implant fixture embedded in the jawbone and the final prosthetic restoration, such as a crown, bridge, or denture. These abutments are designed to provide superior aesthetic outcomes due to their tooth-like color and translucency, which reduce the risk of graying at the gumline—a common issue with traditional metal abutments. They are also valued for their biocompatibility, high fracture resistance, and low plaque affinity, making them suitable for both anterior and posterior applications where aesthetics and soft tissue health are prioritized.

The global Zirconia Implant Abutments market size was estimated at USD 265.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
