## Abstracts

Zirconium tetrafluoride, with the chemical formula  $ZrF_4$ , is an inorganic compound primarily used as a key raw material in the production of fluoride glasses, especially zirconium fluoride-based glasses (ZBLAN), which exhibit exceptional optical transparency in the mid-infrared range and are utilized in specialized fiber optics, laser systems, and medical imaging devices. It also serves as a precursor in the synthesis of other zirconium compounds, finds applications in certain catalysts and nuclear industry processes due to zirconium's corrosion resistance and low neutron absorption cross-section, and is employed in ceramics and coatings where high thermal stability and resistance to aggressive environments are required. The compound is typically produced through the reaction of zirconium compounds with hydrofluoric acid or fluorine-containing agents, and its market is closely tied to advancements in optoelectronics, defense, aerospace, and energy sectors.

The global Zirconium Tetrafluoride market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
