## Abstracts

Zinc oxide blocks are solid forms of pure or high-purity zinc oxide, typically manufactured through processes such as the French process (indirect method) or the American process (direct method), and are characterized by their high thermal stability, chemical inertness, and versatile functional properties, including ultraviolet (UV) absorption, antibacterial activity, and semiconductor behavior; these blocks serve as a foundational raw material that is subsequently ground, milled, or processed into powders, dispersions, or other forms for application across diverse industries such as rubber manufacturing (where it acts as an activator in vulcanization), ceramics (as a flux and opacifier), pharmaceuticals (in ointments and sunscreens for its UV-blocking and skin-protective qualities), electronics (in varistors and transparent conductive films), and cosmetics, making them a critical intermediate product in the supply chain rather than an end-use consumer good.

The global Zno (Zinc Oxide) Blocks market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
