Report Overview

Zoom telecentric lenses are specialized optical devices used in machine vision systems to provide accurate and distortion-free imaging of objects. These lenses offer the ability to adjust the focal length and magnification without changing the image size, making them ideal for applications requiring precise measurements and inspections. Zoom telecentric lenses ensure that each pixel in the image corresponds to a consistent size on the object being viewed, enabling accurate analysis and measurement. By maintaining a constant perspective across the entire zoom range, these lenses eliminate perspective errors and deliver high-quality images with minimal distortion.
