Abstracts

ZSM-35 molecular sieve is a high-silica zeolite belonging to the pentasil family, characterized by a two-dimensional pore system with intersecting 10-membered ring channels that provide shape-selective properties ideal for catalytic and adsorption applications. Its unique framework structure, featuring sinusoidal and straight channels with pore openings of approximately 0.54 nm x 0.56 nm, enables selective separation of molecules based on size and configuration, making it particularly effective in processes such as methanol-to-olefins (MTO), hydrocarbon isomerization, and the removal of volatile organic compounds. The material?s high thermal and hydrothermal stability, acidity, and resistance to coking further enhance its suitability for industrial catalytic processes in refining, petrochemicals, and environmental applications.

The global Zsm 35 Molecular Sieve market size was estimated at USD 285.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
